

PRACTICE UPDATE
All BCCH and BCW Programs
COVID-19 Patient Flow and Management Guideline
May 12, 2021

What's New?	This document outlines the plans each clinical program within Children's and Women's hospital have considered, how they are planning to manage patients as well as outlining how the patients will move between the programs/clinical units when required to do so.
Why?	CW COVID-19: Patient Flow and Management is based on a set of key principles organized to reduce the risk of transmission of COVID-19 to staff, patients and families.
How does this affect my practice?	Health care providers and staff need to be aware of and familiar with their respective program/unit areas patient flows and management.
Who do I contact for further information?	Speak with your program manager and/or senior director. Email Infection Prevention and Control at IPACS@cw.bc.ca and/or phone the CW IPAC @ local 6135.
