

## USE OF AGE BASED ASSESSMENT TOOLS >17y/o STANDARDIZATION – ASSESSMENT

### HIGHLIGHTS

#### At Go-Live

- ▶ As per current practice, patients admitted at BCCH will be assessed using standard pediatric tools, regardless of age
- ▶ Patients older than 17 y/o will use the tool validated in the oldest pediatric age category, when applicable (e.g. PEWS will be used for patients admitted to BCCH)

### KEY POINTS TO REMEMBER

- It is best practice to have staff utilizing tools and scales they are educated in and most familiar with, even in older patients
- There are areas and situations where there may be exceptions. Please connect with your area leadership for direction.
