

All Staff: C&W CST Biweekly Practice Update

Date: April 5, 2022

Zoom support is available 24/7 via *Launchpad*

and *Citrix Storefront/Enterprise Apps*

<https://zoom.us/join> Meeting ID: 652 5721 0705 Password: 084973

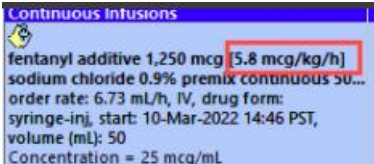

See the new Zoom Help Guide [here](#)

Key Issues

5 new topics including:

- Using the dosing calculator
- WOW Maintenance
- Transfusion Reactions

View past Daily Practice Updates on:
[e-POPs: C&W CST Clinical Readiness Resources](#)

Topic	Why Is It Important?	Practice
<p>Why use the dosing calculator?</p>	<p>The dose calculator ensures a completed order to pharmacy and a clear target dose that is forward facing on the MAR (instead of comments).</p>	<p>Continuing to use the dose calculator ensures complete, accurate orders and provides the clearest dosing plans to pharmacy and nursing. No more cellphone calculators needed!</p> <p>Remember to review the final dose and round when appropriate (ex. 31.13 mg should be rounded to the nearest mg or 5 mg as appropriate).</p>

<p>WOW Maintenance</p>	<p>Make sure your workstation is ready to go!</p>	<p>Restarting: Don't forget to restart your WOW at least once a week for best performance.</p> <p>Cleaning: Housekeeping will deep clean WOWs every 2 weeks but what about in between?</p> <p>Information is available on Quick, Complete and Deep Clean and Disinfecting of WOWs on CST Cerner Help: HOW TO CLEAN & DISINFECT A WOW</p>
<p>The CST Hub is Closed</p>	<p>Other supports are in place during the stabilization and sustainment phases of CST.</p>	<p>For assistance using CST Cerner, continue to access CST Stabilization Support.</p> <p>For assistance with CST Access and Training, visit the C&W CST Cerner Learning Support team site.</p> <p>For fingerprinting, use regular process on unit (for help, see this OmniceLL User Access Guide)</p>
<p>Transfusion Reactions</p>	<p>Communication of transfusions reaction with TML ensures proper follow-up.</p>	<p>IMPORTANT: All transfusion reactions and suspected reactions must be reported to TML. This allows TML staff & the Hematopathologist to enter results/comments into Sunquest.</p> <p>Regardless of a requirement for patient samples, clinical staff must trigger the process by selecting one of the two PowerPlan options in Cerner; either a TR Notification or TR Investigation. CST Cerner Help: Transfusion Reaction guides you through the steps. The workflow looks different in Cerner but communication with TML remains the same (Transfusion Reaction Response: Algorithm C&W).</p> <p>If you have questions, the transfusion safety Nurse Clinician is available 08:30 to 16:00 most weekdays via Vocera "Transfusion Nurse".</p>

Signature Record Sheets	Providing a signature record; either written or electronic, is a legal requirement.	Bottom line on the Signature Record. If you document and sign anything on paper; either to be part of the chartlet or during downtime, you also need to sign the signature record sheet. Make sure it's legible! You DO NOT need to sign on the signature record if all your documentation is within CST Cerner, as it has your electronic signature record.
