

Direct Maternal Admission to BCW Rabbit

BCW Rabbit

Aug 28, 2023

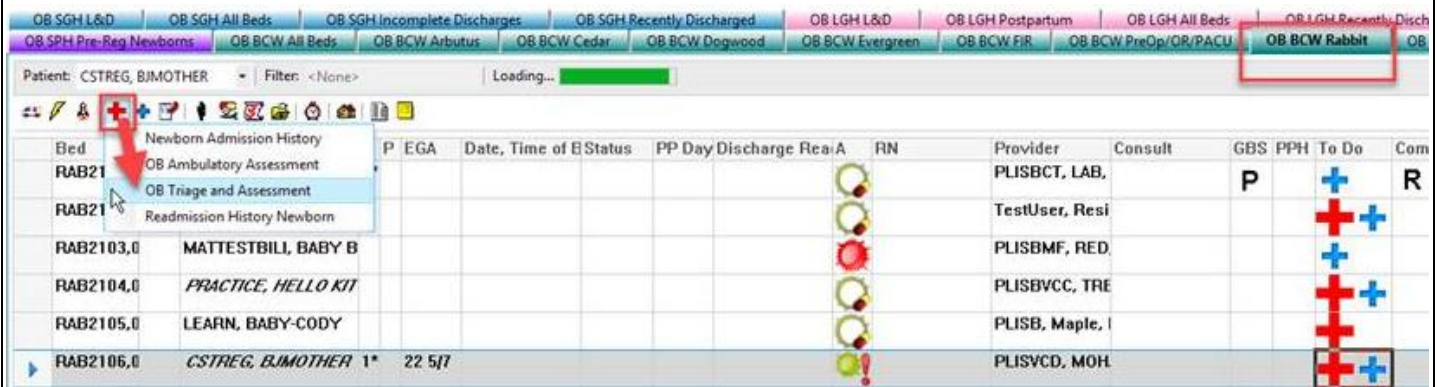

HIGHLIGHTS

- ▶ Select the correct encounter type: inpatient encounter in the BCW Rabbit location
- ▶ If the patient delivered at a non-CST Cerner site, 1) complete the OB Triage & Assessment Powerform, 2) **open a pregnancy** and 3) **back enter the delivery information in iView** (this information flows to reports, dynamic documentation and the postpartum liaison)
- ▶ If the patient delivered at a live CST-Cerner site, complete the OB Triage & Assessment Powerform, **and reopen the last active pregnancy** (if needed)
- ▶ Document postpartum-specific assessments in the OB Postpartum band
- ▶ Document head to toe assessments in the OB Systems Assessment band

OB triage & assessment powerform

If the patient is a direct transfer to BCW Rabbit, NICU nurses will document in the OB Triage & Assessment Powerform. If the patient was seen in the BCW UCC prior to transfer to BCW Rabbit, NICU nurses do not need to document in the OB Triage & Assessment Powerform, but can view it for reference at any time in the Form Browser table of contents.

NICU nurses can document in this Powerform via the OB tracking shell:

Navigate through each section in the Powerform and enter information based on data in the chart, and the patient assessment on arrival.

Information charted in this Powerform flows to other areas of the chart, such as the OB tracking shell or the liaison forms. Therefore, it is important to document key prenatal investigations and labs within this Powerform, if not already completed.

Once documentation is complete, click the green check mark in the top left corner to sign (not save).

If 1) modification of data previously entered, or 2) new data needs to be added to this Powerform, this can be done:

Navigate to Form Browser in the blue table of contents->right click the Powerform->select modify->document mods/add new info as needed. Click the green check mark to sign when documentation complete.

View documentation

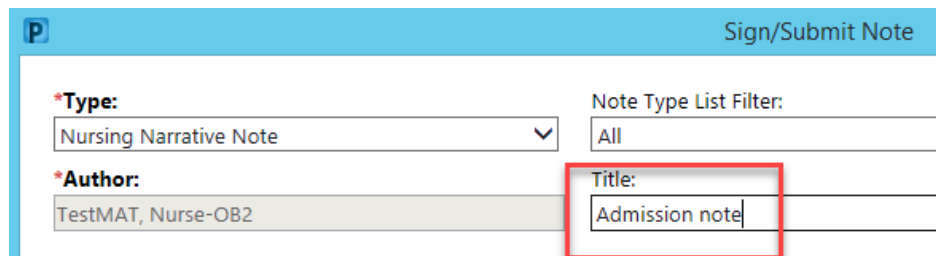

OB Postpartum Band for postpartum assessments:

- Including vital signs, documented in the MEOWs section

OB Systems Assessment Band for head to toe assessments

If additional documentation, that cannot be adequately captured in IView, is necessary ->click the add+ button next to Documentation on the table of contents bar->create a nursing narrative note.

*After selecting the sign/submit button, modify the nursing note **title** to specify the nature of the note:

Back enter the delivery information in IView

If the patient delivered at a non-CST Cerner site, nursing will need to back enter the 1) delivery date/time, 2) delivery type, and 3) neonate outcome. This information has downstreams to other parts of the patient chart, and will allow the pregnancy to be closed seamlessly upon patient discharge.

Note the NICU Nurse will need to manually pull in the Labour and Delivery band and the Newborn Delivery Data band as these are not defaulted on view for the NICU Nurse caring for a postpartum mom.

Navigate to iView:

Labour & Delivery band-

->Delivery information nursing section->open a dynamic group for the baby (baby A), and fill in the delivery date, time.

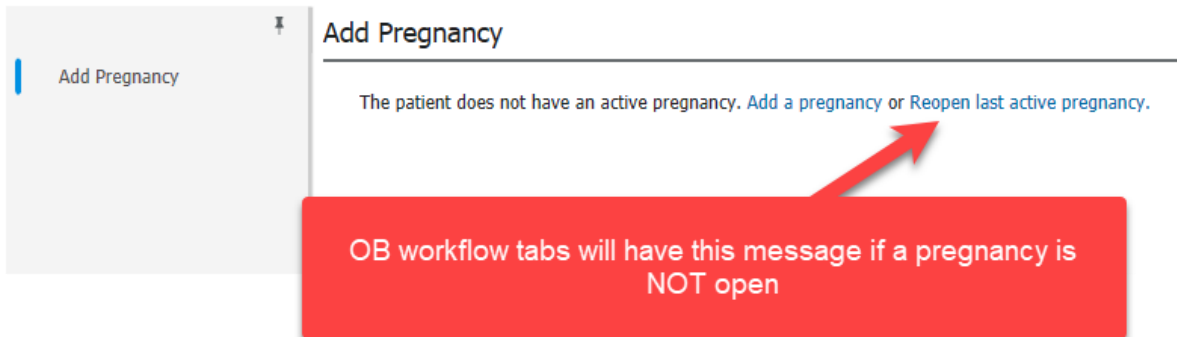

->Delivery information provider section->delivery type (e.g vaginal)

Newborn Delivery Data band

->Initial newborn information section->document neonate outcome (e.g live birth)

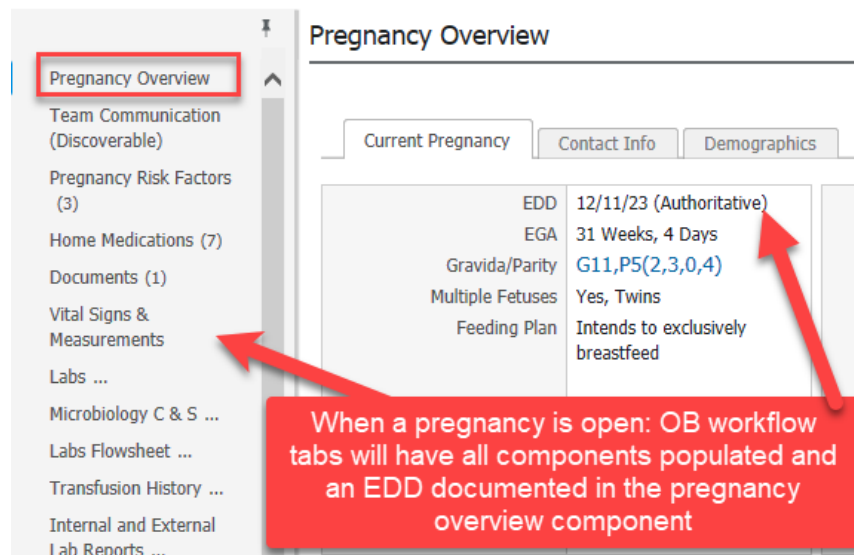

*Clinician's will need to refer to the chartlet for this information (paper partogram and labour & birth summary)

If the patient delivered at a live CST Cerner site, confirm the patient has an open pregnancy.

The screenshot shows the 'Add Pregnancy' workflow tab. The main content area displays the message: "The patient does not have an active pregnancy. Add a pregnancy or Reopen last active pregnancy." A red arrow points from a red callout box to the text "Add a pregnancy".

OB workflow tabs will have this message if a pregnancy is NOT open

The screenshot shows the 'Pregnancy Overview' workflow tab. The left sidebar has 'Pregnancy Overview' highlighted with a red box. The main content area shows a table with pregnancy details. A red arrow points from a red callout box to the 'EDD' field.

Current Pregnancy		Contact Info	Demographics
EDD	12/11/23 (Authoritative)		
EGA	31 Weeks, 4 Days		
Gravida/Parity	G11,P5(2,3,0,4)		
Multiple Fetuses	Yes, Twins		
Feeding Plan	Intends to exclusively breastfeed		

When a pregnancy is open: OB workflow tabs will have all components populated and an EDD documented in the pregnancy overview component

What are some additional resources and supports?

- [CST Cerner Help: Open a Pregnancy](#)

Who do I contact for further information?

- BCW NICU CRN/PCE teams
