

Postpartum VTE Prophylaxis Standard Administration Times STANDARDIZATION – MEDICATION

HIGHLIGHTS

AT GO LIVE

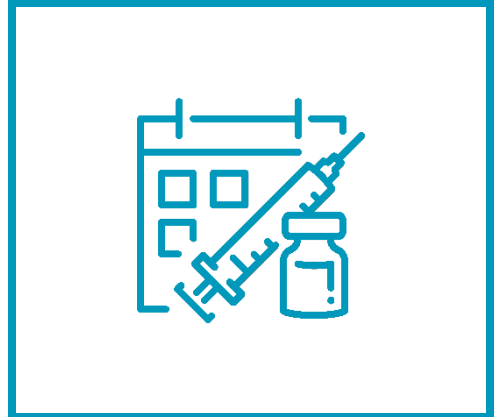

- ▶ The RN will be responsible for manually rescheduling the first dose of enoxaparin, and sending a medication request to Pharmacy to reschedule all subsequent doses for 1000 or 2200, as per policy

Reduce errors and adverse events

Improve quality and consistency of care

KEY POINTS TO REMEMBER

When enoxaparin orders are placed, the times calculated are based on when the order is entered, not time of birth. The RN is responsible for ensuring correct times are entered into electronic MAR, so it is scheduled according to time of birth/ordered time.

Example of standard enoxaparin order you may see:

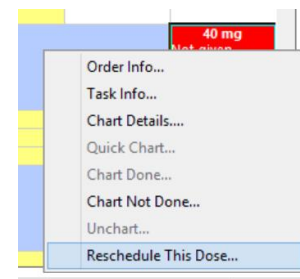

Begin at least 12 hours post delivery or as otherwise indicate...

<p>enoxaparin</p> <p>Details: 40 mg, subcutaneous, q24h, drug form: syringe-inj, start: 12/14/21 18:00:00 PST</p> <p>Order Comment: Begin at least 12 hours post delivery or as otherwise indicated. For weight less than 100 kg. Continue until discharge. DO NOT administer low molecular weight heparin (LMWH) [enoxaparin] within 4 hours of epidural catheter removal</p>
--

NOTE: The order does not specify to schedule doses after initial dose at 1000 or 2200, but it is C&W policy to schedule at these times. See policy [here](#).

Initial Dose: The initial dose of enoxaparin will be manually rescheduled by RN.

Right-click on dose you want to reschedule, select *Reschedule This Dose*, enter new time/date for dose that is appropriate for your patient.

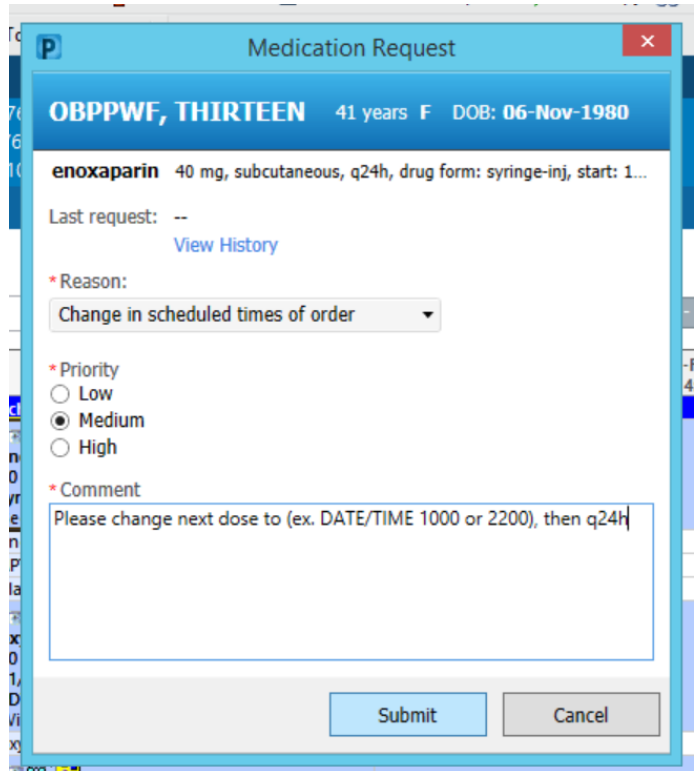

Please see CST Cerner help for rescheduling one single medication dose [here](#) if you need assistance.

CST PRACTICE POINTER

POINTING YOU IN THE RIGHT DIRECTION

Subsequent Doses: Subsequent doses are to be scheduled at 1000 or 2200 as per C&W policy

In the MAR, right click on medication and select medication request. Send a *Change in Scheduled Times of Order*. Please see CST Cerner help for rescheduling multiple doses of medication [here](#) if you need assistance. Pharmacy will then process and change times on the electronic MAR.
