

Practice Change: New Chemistry Analyzer

Starting **March 7, 2023 @ 10:30:**

C&W Lab is getting new chemistry analyzer equipment. Not only are Bilirubin Orders changing (See [Practice Change](#)) but 4 other tests previously tested from plasma specimens will change to requiring serum specimens.

These include:

- hCG
- Complement C3
- Complement C4
- Estradiol

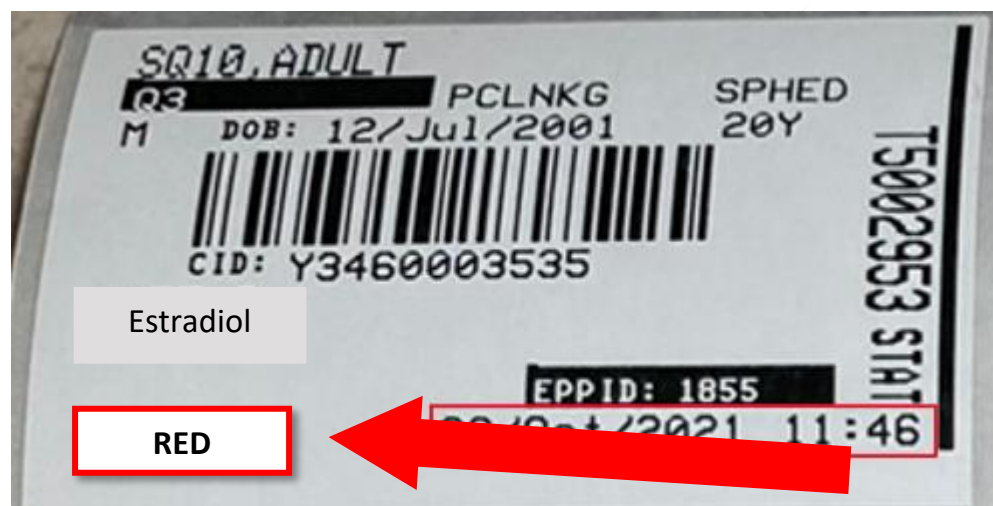

The [eLab Handbook](#) will be updated accordingly.

What do I need to know?

Areas with Clinical Collect:

When using Sunquest Collect, the prompting and label will be updated to reflect the required RED TOP tube.

Areas without Clinical Collect:

For nursing staff who don't use clinical collect please ensure RED TOP tubes are collected for these tests and refer to [eLab](#) as needed.
